Rema Tip Top teams up with Drew Project Services to extend Infrastructure Capabilities

Edited by on 5. Feb. 2020

Poing, Germany –

The new agreement bolsters Rema Tip Top's deep domain experience in the installation and maintenance of conveyor systems for Australia's leading industrial companies, adding a new and unmatched capability to provide broader infrastructure services. "We've long been recognised as a leading provider of products and services that help keep Australian industry on the move. From conveyor belt design, componentry and specialist repair services, we've been able to hone our skills over decades to become expert in the installation, maintenance and the replacement of conveyor belts globally," said Steve Hipwell, Rema Tip Top's National Projects and Tenders Manager. This new agreement with Drew Project Services really extends our capability to provide turnkey solutions for our customers in civil and mechanical disciplines across both maintenance and project requirements. These services include – detailed design and fabrication, detailed earthworks, form work and steel fixing, concreting, project management and supervision, heavy construction, site installation and commissioning, specialised welding and cutting, crane operation and rigging, painting and blasting services. Our partnership with Drew Project Services enables us to focus on the broader infrastructure needs of our customers. We've long spoken about our desire to provide total industrial solutions that are aligned to our customers' operating challenges and the establishment of this new infrastructure capability is evidence of this commitment. "The new partnership is in effect from January 1,

2020.
