ContiTech: The Garage - Predictive Maintenance at the Doctor's Practice

Edited by on 13. Mar. 2017

It is innovative. It is about conveyor belts. It is at the doctor's practice: Contitech's way of predictive maintenance. Take your seat, lean back, and enjoy the first episode of "The Garage". Stay tuned until next time. (Published on YouTube on February 6, 2017)

Backed by outstanding conveyor belt technology and expertise, ContiTech can be found wherever raw materials are extracted, processed and distributed. Making materials available in an as environmentally sound manner as possible presents a technological challenge, time and time again, since raw material belts are scattered throughout the world. They are found in rough topographic areas, above and below ground.

With a comprehensive product range, Contitech covers all aspects of surface and underground mining. As a recognized international partner, the company supports its customers with reliable and economic conveyor belt technology worldwide.

As developer and original equipment manufacturer, the ContiTech Conveyor Belt Group is a partner to many industries such as machine and plant engineering. The group offers a range of steel-cord and textile conveyor belts, carefully matched service material as well as special products.
