Matcon: Wetra Case Study Video

Edited by on 20. Dec. 2023

This video demonstrates how Malaysian-based Wetra Food Industries use a Matcon IBC System to produce their extensive range of beverage mix products.

The Matcon System is especially suited to manufacturers who have a portfolio of products that are high in variety or contain allergens. The ability to blend without cleaning between recipe changes and the flexibility to send IBCs to whichever packing line is ready, means that manufacturing flow is optimised and output maximised, providing a good return on investment. The Matcon IBC system is designed to the highest hygiene standards, ensuring product integrity and food safety throughout the manufacturing process. (Video published on YouTube on January 28, 2016)

Matcon specialises in providing efficient and flexible handling of powders using Intermediate Bulk Containers (IBCs). The Matcon IBC system delivers automatic powder handling and mixing, mainly for the Food & Pharmaceutical sectors around the world.
