Monitor Technologies: Latest Generation of Vibratory Level Sensors

Edited by on 20 Dec 2019

The DuraVibe sensors do not require calibration and

are unaffected by varying material compositions, like temperature, moisture, etc. In addition, DuraVibe Series includes an external status LED (on Ord. Loc. units) and a fail-safe signal in case of power loss. Both models offer single-probe designs that prevent material build-up that causes false signaling. The Model VibraRod is a sturdy and reliable level indicator for a variety of applications, yet is an economical vibratory level solution. The Model PZP has a diamond-shape probe that provides superior durability with industry-leading probe strength and excellent versatility to detect very light to heavy materials. The Model PZP offers

a variety of configurations including pipe extension, cable extension & high-temperature options.

About Monitor

Monitor Technologies LLC is a dependable manufacturer of silo level measurement instrumentation, solids flow monitors, inline moisture measurement sensors, particle emission monitors and aeration devices for the worldwide powder and bulk solids markets. The experience and market knowledge gained over 60 years of business has earned Monitor a reputation for providing high quality and reliable product solutions backed by trusted customer support. Monitor is located in Elburn, Illinois.
