Monitor Tech: RadarRight(TM) Non-Contact Continuous Level Sensor

Edited by on 8. Jun. 2017
Elburn (IL), United States -

Monitor Technologies' new RadarRight(TM) is a non-contact radar continuous level sensor which means nothing to "touch" your process. The RadarRight provides dependable, real-time level measurements at the "right" price for use with powders, bulk solids and liquids. Works in dusty conditions. The instrument uses proven microwave "pulse" technology and has a small beam angle to concentrate energy for high accuracy and reliability. The sensor has no moving parts to wear which leads to long operational life and low maintenance. The RadarRight is easy to set-up / configure with the included LCD push button display module. Analog or RS-485 / Modbus versions are offered. Suitable for various metal or nonmetal storage vessels. RadarRight is Monitor Technologies' latest addition to its continuous level sensor line.
