BEUMER Group: Alexander Tigges is the new Director Global Sales Conveying & Loading Systems

Bearbeitet von am 3. Mär. 2021

Beckum, Deutschland -

Since the beginning of this year, Alexander Tigges has been head of sales at the Center of Competence (CoC) for Conveying & Loading Systems (CL Systems). The 51-year-old mechanical engineer can draw on many years of experience in international plant design. Before joining BEUMER Group, he was, among other things, product manager and sales manager for large-scale plants at an internationally active manufacturer of cement plants.

BEUMER Group, together with its Center of Competence CL Systems, globally develops and implements complex system solutions for various industries, such

as the mining and raw materials industries, and port handling. This business field makes the system provider a powerful global partner in the field of plant engineering. The inquiries come from Europe, but more from Australia, the Far East, Africa, South America or the USA. "I am looking forward to contribute with my many years of experience to the further development of the systems business within BEUMER Group," says Alexander Tigges.

The new Director Global Sales Conveying & Loading Systems succeeds Andrea Prevedello, who was appointed CEO of BEUMER Group Austria at the turn of the year.
