BMRX-100 Rotary Level Indicator by BinMaster

Edited by on 30. Aug. 2023

The new BinMaster BMRX-100 rotary level indicator is an electromechanical device used in solids and powders to prevent bin overfills, dry runs, or to shut off a process. The BMRX-100 has no printed circuit board, so it's impervious to moisture and vibration found in many tough processing environments.
