Flexicon: Bulk Bag Discharger Systems Handle Recycled Rubber Particles

Edited by on 3. Nov. 2023

Edge Rubber produces over 30 thousand tons of crumb rubber per year from over six million scrap tires with the help of bulk bag dischargers from Flexicon.

Of the 30 million scrap tires recycled into ground rubber in U.S. per year, some 6 million (20%) find their way to the Edge Rubber plant in Chambersburg (PA), USA, the oldest and most successful facility producing fine mesh crumb rubber in the United States. One of the most efficient scrap rubber plants in the country, much of the plant's efficiency is attributable to its bulk raw material handling system utilizing six Flexicon bulk bag dischargers.
