

11. - 12. Sep. 2024

Compounding World Expo

Trade Fair - Bruxelles, Belgium

Edited by on 7. Dec. 2023

"The European exhibition for plastics additives and compounding"

This event brings together professionals from across the compounding industry for two days of networking, knowledge sharing and innovation. Your free ticket provides admission to the largest concentration of compounding related exhibits in Europe including access to the co-located events: Plastics Extrusion World Expo and Plastics Recycling World Expo.

As part of the AMI Plastics World Expos Europe 2024, the Compounding World Expo will feature the Polymer Testing Zone. Here, leading companies will present their latest products and technologies for the testing and analysis of polymers.

The need for accurate testing has never been so important as companies move towards more sustainable production lines. For example, as the use of recyclates increases, the properties of these materials must be precisely measured to ensure product quality.

Visitors to the Polymer Testing Zone can find and compare the latest innovations and software to receive useful and meaningful results for their next project.
