FAM Ship Loader for Quellaveco Project

Edited by on 22. Dec. 2022

Magdeburg, Germany –

For Anglo American plc's Quellaveco project in Peru, FAM has supplied a ship loader of type SL1320.51/30 for the handling of copper concentrate. The FAM ship loader will be responsible for the handling of the product with a conveying capacity of 1320 t/h. The FAM scope of delivery included project designing, manufacturing, transportation, assembly and commissioning of all mechanical components, electrical equipment and control systems.

The bulk material is transferred to the conveyor system of the ship loader via the conveyor line coming from the mainland, and the vessel is loaded by the belt conveyor of the boom. The ship loader has a slewable superstructure. The loading device is located at the head of the boom.

About FAM

FAM is now BEUMER Minerals & Mining GmbH. FAM is an international organization with a proven history as a manufacturer of bulk material handling systems and a heritage dating back to the 19th century. As one of the few global full-service providers, we offer everything required for your bulk material handling needs. We provide cost effective, modern and efficient solutions for various industries working with raw materials from extraction and processing to conveying, loading and storage. BEUMER Minerals & Mining GmbH features the long-time expertise in successful combining of serial manufacturing and uniquely

customized equipment, offering not only high-quality engineering but also profound service.
