Bedeschi: Shiploader for Fertilizer and Granulated Urea supplied to Fertil Ruwais Terminal

Edited by on 1. Aug. 2022

Limena (PD), Italy -

For Fertil Ruwais Terminal Bedeschi will supply a shiploader for fertilizer and granulated urea to replace the existing one. The design capacity of the shiploader is 1.200 t/h and it will be delivered fully erected to site. The machine will be running on rails, with a towed tripper to divert the product from a wharf gallery conveyor onto a transfer belt, then to a loading boom belt.

The machine will be running on rails, with a towed tripper to divert the product from a wharf gallery conveyor onto a transfer belt, then to a loading boom belt. The tailor-made shiploader will be luffing and slewing to facilitate all loading operations required. The target is to set all the application and activities without interfere with operation activities of the terminal.

Design, engineering and construction for this machine are based on Bedeschi know-how, optimized and customized according to the client requirements. Specific design, characteristics and performances are developed and integrated jointly with client technical team.
