The Josemaria open-pit mine is a high-grade copper-gold porphyry project. It is located in Argentina some 450km from San Juan, capital city of the province, in an important and emerging copper mining district. It has an anticipated mine life of 19 years.

"The order of SAG mills, ball mills and cyclones to the Josemaria Resources copper-gold project in Argentina is very positive news for FLSmidth. It illustrates

great confidence in FLSmidth and emphasises the proven performance and productivity of our high-end solutions. The efficiency of the equipment will meet our customer promise to deliver sustainable productivity to the copper and gold mining industry," comments Mikko Keto, Group CEO and Mining President at FLSmidth.
