BinMaster Joins K-State Bulk Solids Innovation Center in Level Measurement Technology Education

Edited by on 17. Jan. 2020

Lincoln (NE), United States -

BinMaster's session will cover the types of point and continuous level measurement sensors with a focus on how each technology works and is applied in a plant environment. It will demonstrate how to integrate an inventory management system into a plant using wireless communication devices and software to make their operation more efficient. It is designed to provide practical knowledge that can be applied immediately upon course completion. "It is a privilege to have been asked to participate and be able to contribute to the educational mission of the BSIC," says Nathan Grube, course instructor and Regional Vice President of BinMaster. "The coursework provided by the Bulk Solids Innovation Center prepares industrial professionals to tap into the power of the latest technology, and it's an honor to be part of that." The training will be held in Salina, Kansas and is open to students and professionals interested in furthering their knowledge in bulk solids handling. [Registration for the course](#) is open to both domestic and global attendees. The cost for the three-day course is USD 1,300.
