Cementation acquires Materials Handling Design & Consulting Company Terra Nova Technologies

Edited by on 1. Apr. 2019

Santee (CA), United States –

Established in 1997 in San Diego, California, Terra Nova Technologies (TNT) subsequently added offices in Boise (ID), USA, and Santiago, Chile, that have successfully served their global clientele by delivering approximately 75 projects in more than 15 countries. With this diverse international footprint, TNT has earned a solid reputation for providing quality design, supply and commissioning services for crushing and screening plants, overland conveyors, heap leach systems and mobile stacking systems for waste and dry tailings. Justin Oleson, President of Cementation Americas, noted “The purchase of TNT fits well within Cementation’s strategy to improve our ability to serve clients, both geographically and across the mining value chain. The combining of Cementation and TNT complements both our underground and surface design/build portfolios, and better positions Cementation to support our client’s total mining needs.” Regarding the acquisition, Ron Kelly, President of TNT, explains, “The combination of TNT and Cementation is an excellent fit strategically. We share several key customers, and together, we can provide these customers with enhanced value through a single source for products and services. There is also significant potential for TNT and Cementation to grow, expanding into new common markets.”
