Kemutec USA: Gardner Mixers - Ahead of their Time

Edited by on 14. Jul. 2017

Bristol (PA), United States -

Through the years, the reputation of [Kemutec](#)'s Gardner mixing technology and manufacturing quality is founded on experience gained through their long service to the food, pharmaceutical, and chemical industries. This proven expertise enables Kemutec to produce a whole range of mixing equipment - from a standard powder mixer to custom built processors - allowing for a wide array of diverse process applications and operating conditions. [KEMUTEC](#) engineers specialize in powder process technology and combine this knowledge with their vast applications experience to design the most suitable mixer for any application. Manufacturing practices are accredited to ISO 9001, meeting the standards imposed by customers.

Gardner Ribbon Mixer

Today, Kemutec has developed an exciting range of cantilevered mixers in parallel with their highly successful range of [**KEK Cantilevered Sifters**](#). With the cantilever mixer design, one set of bearings and seals at the non-drive end are eliminated. This arrangement of the cantilevered agitator and mixer body, together with improved access via a full diameter hinged and safety interlocked door at the non-drive end of the mixer vessel, offers significantly improved access for cleaning and hygiene. Kemutec's Gardner Mixer technology has come a long way since the 1920s attributing to their reputation as being **Ahead of Their Times**. [**Read more about Kemutec's Gardner Mixers**](#)
