Advanced Blending Solutions (ABS) Introduces Automated Blender Cleaning

Edited by on 29. Jun. 2017

Advanced Blending Solutions (ABS) is pleased to introduce its first automated self-cleaning blender, the ***Chameleon Simplicity 3000***. Designed to meet a significant market demand, the Chameleon Simplicity 3000 is a fully automated material cleanout system that can complete a blender material change without operator assistance.

The Chameleon Simplicity 3000 by
Advanced Blending Solutions (ABS)

Material is removed from the feeder tray using an automated vacuum system, and can be sent to a material collection station or bin for later use. Compressed air cleans the side walls of the component hopper. Changeovers can be done in as little as 20 seconds with the smallest **ABS** feeder, assuming that the rundown feature was used. **Chameleon** can significantly reduce purge waste, and increase equipment run time. It can be retrofitted to any Advanced Blending Solutions blender. [More information on Advanced Blending Solutions \(ABS\)](#)
