

Stork Umweltdienste GmbH - Germany

Stork Umweltdienste GmbH, Germany is a crushing and screening company, sorting out metal particles.

The material they work with is ash and slag from power stations where they are burning waste and garbage.

The environment is dusty, abrasive and corrosive. The Rulmeca products supplied are Motorized pulleys 220M, 320M, 400H as well as idlers.

Stork appreciates the low maintenance level of the Motorized Pulley as well as the centralized weight of our drive, which leads to lighter frames on all new installations.
