

## CONCRETE CLASS UPGRADING LIQUID ADMIXTURE **K<sup>100</sup>®**

Admixture K<sup>100</sup>® or as we say “K100”, is a liquid form of KALMATRON® KF-A, worldwide known as a Concrete Class Upgrading Admixture.

K100 acts by four ways after pouring into the concrete batch:

1. As a Water Reducer during of mixing and pumping time;
2. As a Plasticizer during of transportation and placement time;
3. As a Shrinkage controlling and Curing Compound during of setting time;
4. As a Strength gainer and impermeability performing agent of hardening time.

K100 is dosed by 54 OZ/CY (2 Liters/m<sup>3</sup>) or 10 OZ per 100 LB (0.7 Liter per 100 Kg) of cement for any field of the concrete and mortars applications.

Product dispensed into the plastic buckets by 4.8 GL (17.7 Liters) or into the IBC by 264 Gallons (1000 Liters) each. Highly economical even by small purchased volumes.

K100 is approved and registered by the USA International Sanitary Fund by #143075, Code R2, RX-2 and patented in the USA #3,680,881 and EU #6915839.
